

Getting Started

From zip to your first honest audit in under an hour.

1 · Look around

Open `interactive/toolkit-browser.html` in any browser. It's a searchable map of all 25 skills, grouped by phase, with a "use when" line and a copy-trigger button for each. This is the fastest way to learn what's in the box.

2 · Install a skill

Skills are just folders with a `SKILL.md`. Copy the ones you want into your Claude skills directory:

```
cp -R skills/lookahead-audit ~/.claude/skills/  
# or the whole stack:  
cp -R skills/* ~/.claude/skills/
```

Restart Claude Code. Tip: install only what your current project needs — skills use a little context just by being available.

3 · Run your first audit

The best first move is to point **lookahead-audit** at a backtest you already have:

```
"Use the lookahead-audit skill on my backtest in backtest.py — is it leaking  
future data?"
```

You'll get a structured report: a data inventory, any confirmed leaks with fixes, and — importantly — a separate section for design-bias choices that a code audit can't fix but you should disclose.

4 · Build the habit

- Before each strategy change, fill a row in `templates/experiment-planner.xlsx` (pairs with the **experiment-design** skill).
- After each run, log predicted-vs-actual in `templates/training-log.xlsx` (pairs with **training-log**).
- Summarize honestly with `templates/backtest-metrics-dashboard.xlsx` (pairs with **metrics-report**).
- When results look too good, run **anti-overfit** before you celebrate.

5 · Suggested learning path

lookahead-audit → backtest-harness → regime-classifier → quality-gate → regime-position-sizing → walk-forward-validation → anti-overfit. Add the rest as your strategy grows.

Disclaimer. Educational software only — not financial, investment, or trading advice. No guarantee of profitability. Backtested results do not predict future performance; a strategy that passes every check here can still lose money live. No live trades are placed and no credentials are stored. Trading carries substantial risk of loss. Consult a licensed professional before risking capital. See LICENSE.txt.
